

**FULLY VERSATILE MODULAR  
DISPLAY SYSTEM**

## How T3architek works

The key components are an aluminium tube and a connector. These join together with a brilliantly simple patented, twist-lock action; no tools are required.

## Why use T3architek?

T3architek successfully fills the gap between shell schemes and larger, more complex, custom built stands. A square tube and connector creates an almost limitless number of design. Of all the innovations in the last 20 years in the exhibition and display industries, large format graphics have had the greatest impact. T3 has been designed to capitalise on this technological revolution. T3 also addresses significant problems within the industry. Because T3 is very easy and quick to construct expensive skilled labour is no longer required and the number of hours spent on and off site are reduced significantly. Being a modular system both storage and transportation costs are also kept to a minimum. An important reality, a Green choice!!

- **T3architek is quick and easy to work with** - rigid and flexible panels are easily attached using a number of different methods, such as magnetic tape, velcro or even screws. Even with tension fabric panel !
- **Load bearing and very stable** - T3Architek easily supports plasma/ screens and heavy display items.
- **Create doors and other features** - full and cupboard size doors whether flat, curved or sliding are easily created out of T3Architek and fitted into the structure.
- **Easy and inexpensive to transport** - the system is very compact and will breakdown into a small volume.
- **Mounting and dismantling operations** - T3Architek makes it possible to keep a control of the costs of maintenance. Logistics becomes easy !
- **Immensely versatile** - the system can be re-configured into a vast number of different structures. Incredibly versatile !
- **Perfect where budget and floorspace are limited** - such as overseas events or where labour costs and availability are at a premium, for instance in the USA. Or in countries where it is difficult to produce cost effective/ successful stands because of the distances involved and labour constraints, for example in parts of Africa, Asia and South America.
- **The complete “exhibition stand in a box” experience** - a full range of accessories is available making it easy to assemble complete kits.

The revolutionary modular system with the look and finish of a custom stand

easyquickversatile

**Plasma screen support**

FAST, EASY  
ASSEMBLY

NO TOOLS  
REQUIRED

STRONG,  
LIGHT FRAME

**Shelving and alcoves**

**Special projects**

RECONFIGURABLE  
AND RE-USABLE

EASY TO  
TRANSPORT  
AND STORE

**Full size doors**

**Multi-curve walls**

THE DESIGN  
POSSIBILITIES FOR  
T3ARCHITEK  
STRUCTURES ARE  
VIRTUALLY ENDLESS

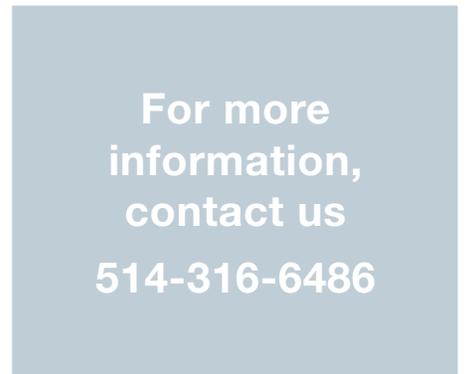

**Illuminated Walls**

**Counters**

**Welcome desks**
